

<b>Mild-moderate exacerbation of asthma</b>	
<b>EXCLUSION CRITERIA</b>	
<b>ABSOLUTE</b>	<b>RELATIVE</b>
<ul style="list-style-type: none"> <li>• PEFR (Peak Expiratory flow rate) &lt; 30% predicted</li> <li>• IV adrenaline required</li> <li>• Evidence of respiratory failure or exhaustion e.g. deteriorating vitals or blood gas</li> <li>• Infective cause requiring admission</li> </ul>	<ul style="list-style-type: none"> <li>• Previous ICU/HDU admissions</li> </ul>

<b>KEY CONSIDERATIONS DURING SSU ADMISSION</b>
<ul style="list-style-type: none"> <li>• Consider and treat triggering causes                             <ul style="list-style-type: none"> <li>○ Infection – CXR prior to SSU admission to exclude pneumonia/pneumothorax; check FBE/CRP</li> <li>○ Drug non-compliance – history, check inhaler and spacer technique and escalation of asthma management plan</li> <li>○ UEC for hypokalemia in setting of excessive salbutamol therapy</li> </ul> </li> <li>• Bronchodilator                             <ul style="list-style-type: none"> <li>○ If not previously received “burst therapy” then Salbutamol 12 puffs via spacer, 3 times over 1 hour and Ipratropium bromide 6 puffs via spacer stat</li> <li>○ Pre and post PEFR measurement at each bronchodilator dosing will allow objective measurement of improvement or deterioration</li> <li>○ Additional doses of bronchodilator e.g. Salbutamol 12 puffs per dose should be charted initially hourly and then, depending on response stretched to 2 hourly and then 4 hourly with a view to discharge</li> </ul> </li> <li>• Steroid therapy - Prednisolone 50mg po stat</li> <li>• Continue usual preventer and other therapies</li> <li>• Progress                             <ul style="list-style-type: none"> <li>○ Discharge will require patient to be able to tolerate lengthening periods (e.g. 1-&gt; 2-&gt; 4 hours) between inhaled bronchodilators without recurrence of symptoms e.g. SOB, dyspnoea, auscultatory wheeze</li> </ul> </li> </ul>

<b>REFERRAL CRITERIA (Respiratory/Medicine)</b>	<b>DISCHARGE CRITERIA</b>
<ul style="list-style-type: none"> <li>• Ongoing abnormal or worsening vital signs</li> <li>• Pathology identified on imaging or lab results requiring admission</li> <li>• Deteriorating symptoms                             <ul style="list-style-type: none"> <li>○ Ongoing salbutamol requirement of 2 hours or less</li> <li>○ Deteriorating PEFR in spite of treatment</li> </ul> </li> </ul>	<ul style="list-style-type: none"> <li>• Able to stretch more than 2 hours without bronchodilators</li> <li>• Normal vital signs</li> <li>• Tolerating oral intake</li> <li>• Adequate social support</li> <li>• Return to baseline mobility and exercise tolerance</li> </ul>

<b>DISCHARGE REQUIREMENTS</b>
<ul style="list-style-type: none"> <li>• Do not discharge overnight</li> <li>• Patient education e.g. printed asthma action plan and triggers for return                             <ul style="list-style-type: none"> <li>○ Must have suggested plan for steroid e.g. 3 day course vs tapering or none</li> <li>○ Must have suggested plan for reliever medication</li> <li>○ Continue usual preventer medication</li> </ul> </li> <li>• Follow up plan - LMO for review within the week or usual respiratory physician</li> <li>• Prescription for discharge medications as indicated e.g. steroids / spacer / fresh bronchodilator or usual preventer, oral antibiotic</li> </ul>
